

# WX-10 Instruction Manual

Thank you for purchasing the VRM effects WX-10 Wah pedal. This unit is a faithful recreation of the classic WH10 V1 Gray, enhanced with several improvements. It features dedicated volume and gain controls, an upgraded buffer with 1M input impedance to ensure optimal sound quality and signal integrity.

With its bold red and black finish, the WX-10 not only delivers a distinctive tone but also provides stage visibility through bottom-mounted LEDs indicating the effect status.

## Controls and Connections

### Top of the Pedal

Wah Expression Pedal: Control the intensity of the Wah effect by moving the pedal forward and backward.

### Side Panel

Volume Control: Increases or decreases the output volume.

Gain Control: Adjusts the additional gain of the wah, allowing anything from a cleaner sound to a slight overdrive when needed.

Depth Control: Alters the depth of the Wah effect, adjusting how aggressive the filter sweep will be.

### Bottom Panel

Activation LEDs: Located at the bottom of the pedal, the LEDs indicate when the pedal is active (Wah engaged) or in bypass.

### Connections

Input (IN): Connect your guitar or bass here.

Output (OUT): Connect this output to the amplifier or the next pedal in the chain.

DC Input: 9V center-negative; power supply with at least 100mA.

### Warranty

This WX-10 Wah pedal comes with a 1-year warranty. For any issues or questions, please contact our technical support via Instagram @VRMeffects or WhatsApp.
